

Raj Kumar Singh

Security Analyst

+917903689873 ◇ 29rajkumarsingh@gmail.com ◇ GitHub ◇ LinkedIn ◇ Portfolio

SUMMARY

Detail-oriented Cyber security student with a strong foundation in secure software development and infrastructure defence. Experienced in deploying SIEM solutions, automating threat intelligence integrations, and performing vulnerability assessments. Adept at bridging the gap between offensive testing and defensive remediation, with a focus on blockchain security and application hardening.

SKILLS & INTERESTS

Programming & Development Java, KQL, Shell Scripting, HTML/CSS

Incident Response Alert Triage, Log Analysis, Threat Detection, MITRE ATT&CK Mapping, IOC Enrichment, Root Cause Analysis, Active Response

Security Tools Wazuh SIEM, Splunk, Wireshark, Burpsuite, Metasploit, Sysmon

Security Architecture IAM, RBAC, Infrastructure Hardening, Access Governance, IAM Controls, OWASP Framework, Malware Analysis

Systems & Networking Linux, Windows Event Logging, TCP/IP, Packet Analysis, IDS/IPS Concept, Endpoint security monitoring

EXPERIENCE

Security Analyst Intern

SilicaSecure Pvt Ltd.

Mar — Present

- Execute threat hunting and vulnerability assessments across client environments, coordinating remediation for critical CVEs to maintain an average patch-to-close time under 48 hours.
- Implemented and audited technical safeguards (encryption, anonymization, and strict role-based access controls) across client infrastructure to secure *Principal* personal data, ensuring alignment with Section 8 obligations of the DPDP Act.
- Conducted targeted vulnerability assessments on public-facing web applications handling user data, remediating high-risk CVEs within 48 hours to prevent unauthorized data exfiltration, alteration, or leaks.

PROJECTS

Enterprise SOC & Incident Response Lab [Link](#)

Oct '25 — Present

- Architected containerized Wazuh SIEM cluster using Docker Compose, reducing infrastructure footprint by 50%.
- Automated Active Response workflows reducing mean time to response (MTTR) to under 5 seconds.
- Integrated VirusTotal API for automated IOC enrichment, reducing manual alert triage time by ~90%.
- Performed log correlation and endpoint monitoring using Sysmon and Wazuh agents.

Java Banking System [Link](#)

May '25 — Present

- Designed and developed a Java-based banking system using microservices architecture, improving modularity and scalability across 4+ independent services.
- Developed secure authentication module with role-based access control, improving system security and access isolation.
- Optimized transaction integrity by managing concurrent data access through synchronized blocks and database locking, preventing race conditions during simultaneous fund transfers.

Polymorphic Malware Simulation & Defensive Research [Link](#)

Jan '25 — Jun '25

- Showcased an innovative approach to cybersecurity by developing a Rust-based malware simulator, achieving 90% evasion against signature-based detection using polymorphic techniques and AES-256 payload encryption.
- Applied software development best practices to build an interactive GUI that visualizes mutation events and behavioral logs, thinking digitally to improve malware analysis workflow efficiency by 60%.
- Demonstrated passion and curiosity by researching and publishing a paper on novel evasion techniques, sharing findings with the cybersecurity community to enable the development of more effective detection algorithms.
